

Sritan Talluri

U.S. Citizen | 571-246-7609 | sritan.st@gmail.com

TECHNICAL SKILLS

Languages: Java, Python, SQL, Scala, JavaScript, Swift, Bash, C, HTML/CSS, AWS

Libraries: Tensorflow, NumPy, Pytorch, Socket, Pandas, Keras

Tools: Git, VSCode, IntelliJ, Eclipse, MySQL, Android Studio, Microsoft Certifications (Word, Powerpoint, Sheets)

EDUCATION

Georgia Institute Of Technology

August 2022 – May 2026

BS in Computer Science

- **GPA: 3.85 out of 4.0** (Highest Honors At Georgia Tech)
- Relevant Coursework: Data Structures, Networking, Computer Systems & Networks, Design & Analysis Of Algorithms, Databases, Machine Learning
- Chosen Specializations: **Information Networks** and **Theory**

EXPERIENCE

Financial Industry Regulatory Authority (FINRA)

May 2024 – August 2024

Software Engineer Intern

Rockville, MD

- Assisted in developing a data quality check system using Scala to analyze **10+ billion daily stock market events**, detecting anomalies to improve data reliability.
- Implemented standard deviation algorithms utilizing both Scala and SQL to increase outlier detection by **100%**.
- Wrote and ran over **300 Unit Tests** through ScalaTest framework and **25 Integration Tests** on the Jenkins framework.
- Automated JSON pre-processing tasks using Bash scripts, facilitating the seamless integration of over **1 million daily data events** into AWS S3 buckets for scalable storage.

Sapot Systems Inc.

June 2022 – August 2022

Software Engineer Intern

Sterling, VA

- Assisted in developing a full-stack website that had over **1 thousand monthly users** for the new applicant tracking system product using Angular for the frontend and Node.js with Express.js for the backend.
- Integrated third-party APIs including Google Maps for location services and Stripe for payment processing.
- Developed RESTful APIs to receive form submissions from the frontend, process the data on the server, and send a sample demo of the product to the designated recipients email.

PROJECTS

GoodVoice | *React Native, Git, Swift* | *Georgia Institute Of Technology*

Jan 2024 – Present

- Collaborated to develop a mobile app to support speech therapy for patients, allowing clinicians to assign speech exercises for patients to complete and patients to complete the exercises and receive feedback.
- Engaged in iterative development, incorporating client feedback at every stage to ensure a refined user experience.
- Created the login and settings screens, focusing on intuitive user interaction and seamless design integration.
- Implemented audio routing with Swift modules and React Native, enabling switching audio control between the phone's bottom speaker and ear speaker.

Finance Tracking Application | *React, Express, Node, Git, SQL*

Apr 2024 – May 2024

- Built a user-friendly web application that tracks the spending of different users using a database.
- React for the frontend and Node.js with Express.js for the backend, enabling interaction with a MySQL database.
- Set up RESTful APIs using Express.js to facilitate connection between the frontend, backend, and database.
- Employed CORS to process data transactions between the client-side application and the server-side database.

Lung Disease Model | *Python, Git*

Sep 2024 – Dec 2024

- Led a team to create an AI model that receives x-ray images, and determines if it is **one of 8 lung diseases**, or if there is no disease.
- Utilized data pre-processing techniques along with convolutional neural networks to get an accuracy of **90+%**
